

Notice before the driver installation

1. Please unplug the USB 3.0 Display Adapter first.
2. Please make sure to uninstall the previous driver before installing a new driver version.
3. macOS has introduced a new feature that requires user approval before loading new third-party kernel extensions. Please approve when the authentication messages appear in sequence or System Preference > Security & Privacy (refer to the pictures below).

Please follow the driver installer installing the USB display device driver. After the system restarts, please plug in the product, and a "USB DISPLAY DEVICE" notification will appear in the upper right corner of the system. Please be sure to click **"Allow"**.

The USB Display Device setting appears, please click **Activate USB Display Driver**

- Enter the system account password

System Preferences is trying to unlock Security & Privacy preferences.

Enter your password to allow this.

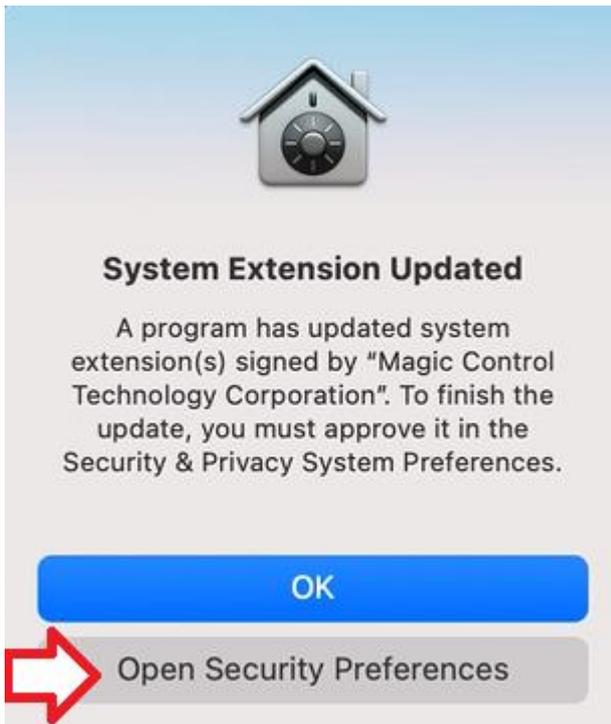

User Name:

Password:

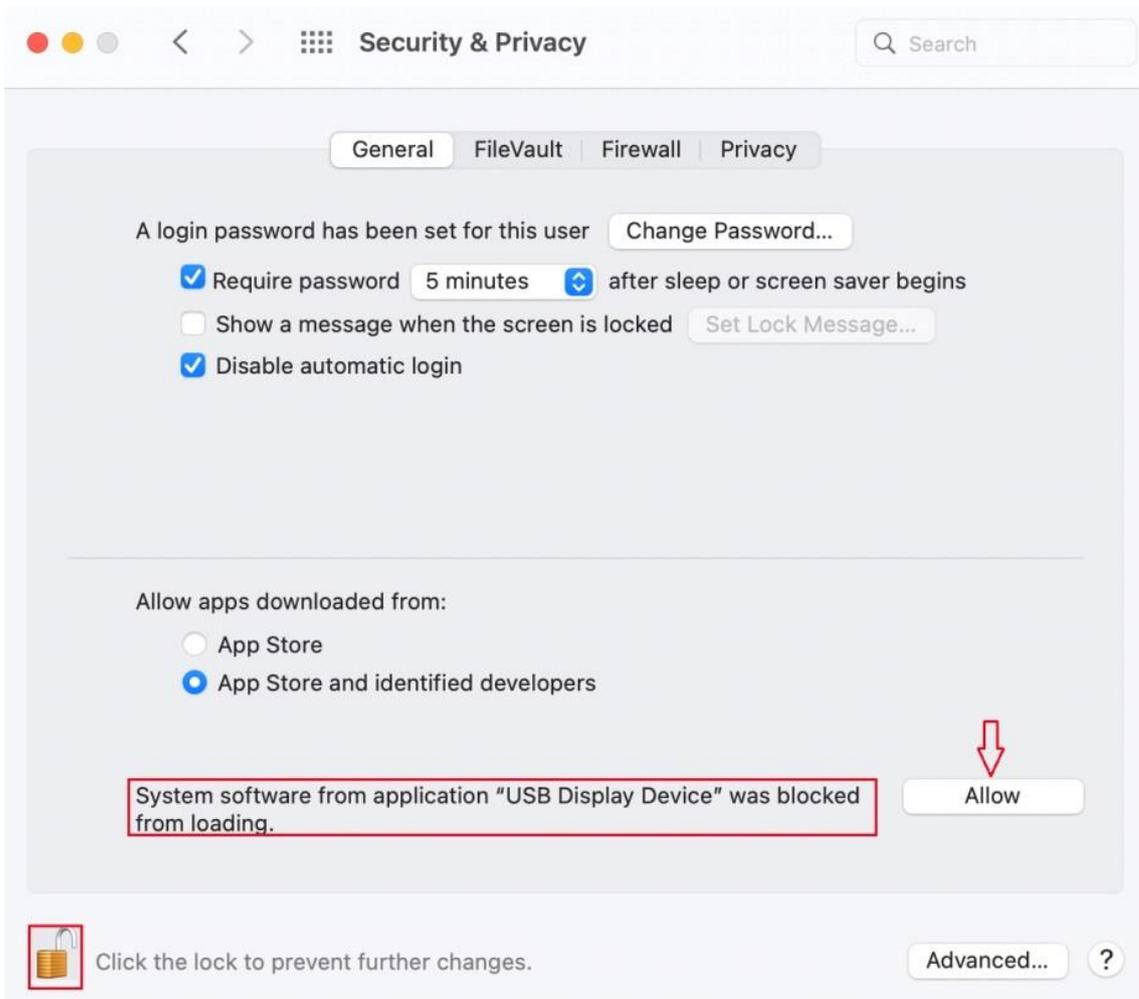

Cancel

Unlock

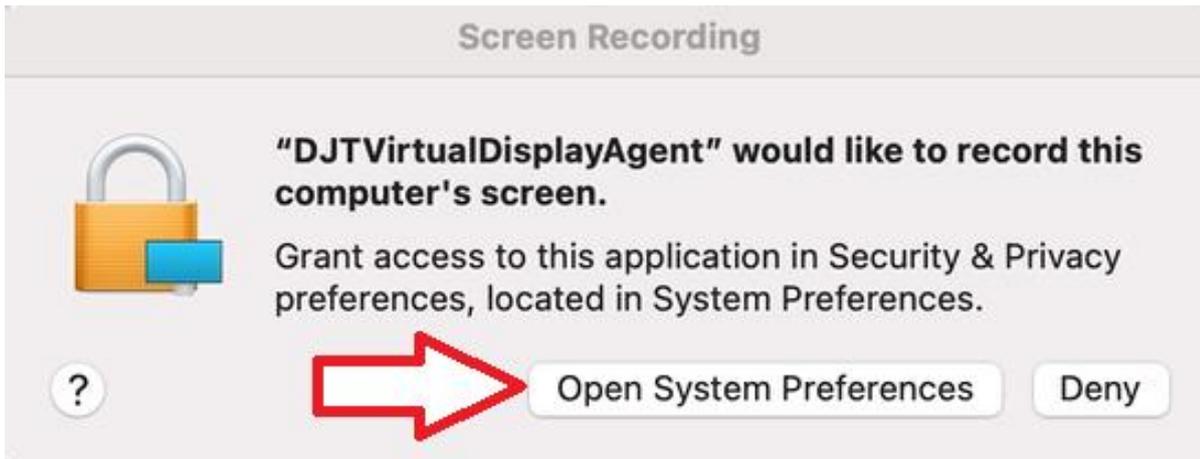

- Click "Open Security Preferences "

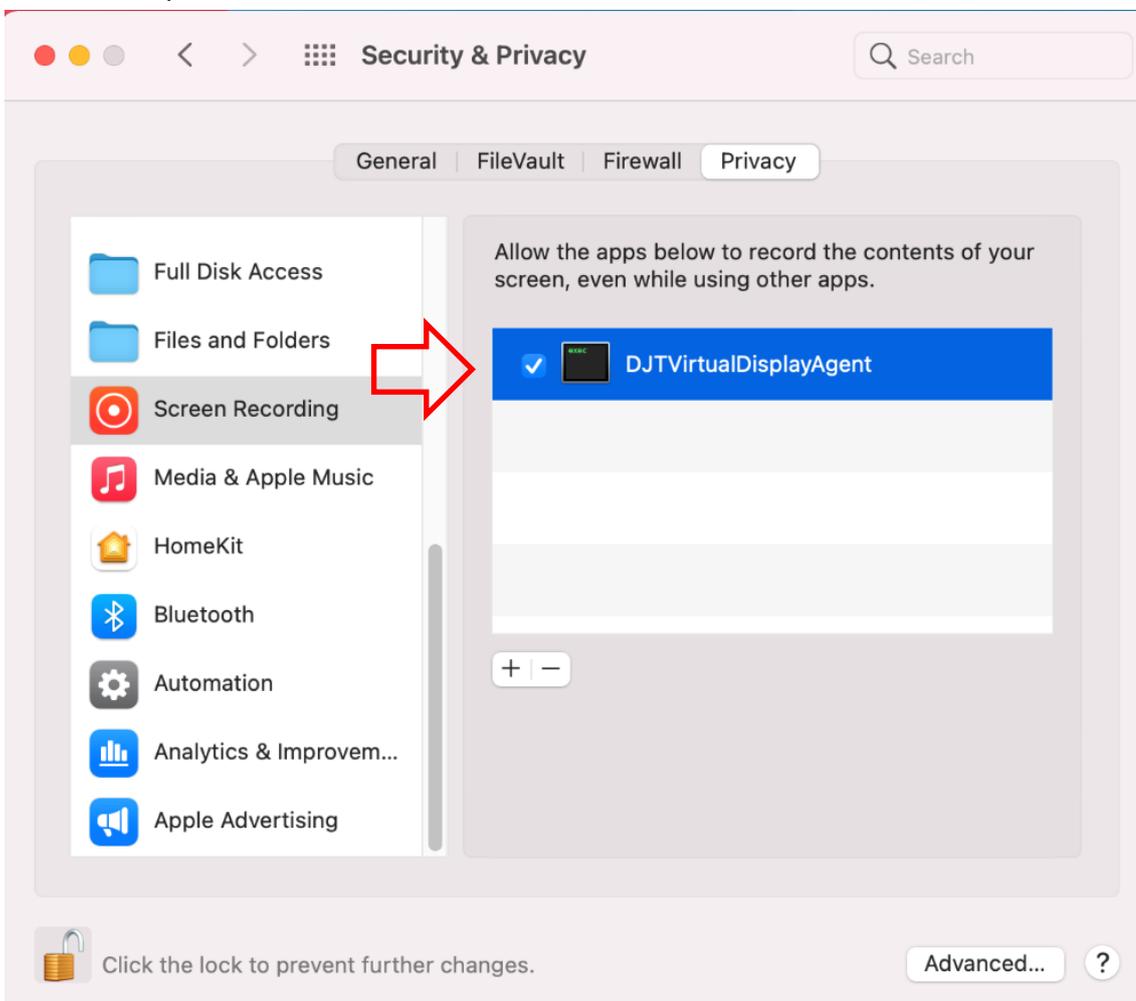

- Click to unlock for doing the changes in "Security & Privacy". Please make sure to click "Allow".

- The authentication message appears again, click "Open System Preferences" under the "Screen Recording" message..

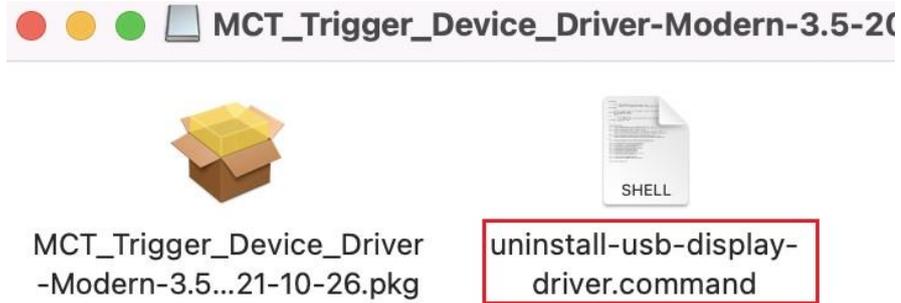

- **DJTVirtualDisplayAgent** APP appears, please tick the app to approve recording the screen contents and complete the installation.

- ✧ If you don't see the above "Privacy" screen pop-up during the 1st driver installation, please go to "System Preference" → "Security & Privacy" → "Privacy" → "Screen Recording" to make sure the driver installation completely.
- ✧ If the screen does not show up after finishing the driver installation, please re-plug the USB Display Adapter.

Driver Un-installation:

- a. Unplug the USB 3.0 Display Adapter from the USB port.
- b. Click “uninstall-usb-display-driver.command” to uninstall the previous driver.

- c. Enter the system password and wait for the message "Process completed" appears.
